Library Administration

Objectives

- Describe the administration and its functions
- Discuss the basic principles of management
- Illustrate the department and its individual operations

Administration of Library

Library administration means managing the performance of the operations and other activities of a library then finally making important decisions.

Administration can be defined as the act or process of administering, especially the management of a government or large institution in order to achieve the goals and objectives

Administration of Library

"Administering means overall determination of policies, setting of major objectives, the identification of general purposes and lying down of broad programmes and projects" – *Theo Haimann*

"Administration means guidance, leadership & control of the efforts of the groups towards some common goals"

- *Newman*

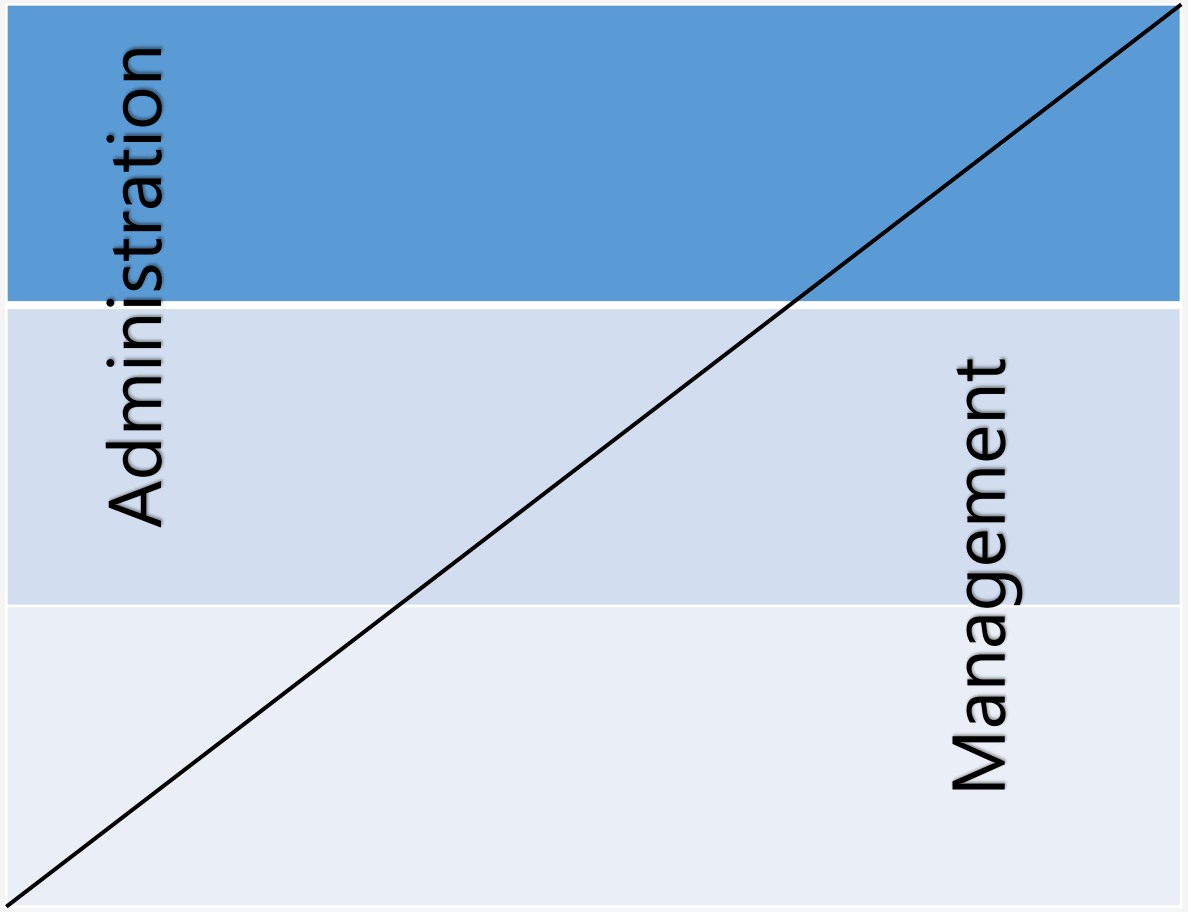
Administration and Management

Administration has to do with the setting of up of objectives and crucial policies of every organization

Management is the act or function of putting into practice the policies and plans decided upon by the administration

Administration	Management
Determination of function	Executive of the function
Administration is the top level	Management is middle level

Administration and Management



Top level

Middle level

Lower level

Levels of Management

"Levels of Management" is defined as a part of an organization that maintains responsibility for the productivity and the work performance of employees. The number of levels in management increases when the size of the business and work force increases and vice versa. Each level possesses certain job responsibilities within their position to ensure the effective overall operation of the organization.

Top level of Management

- Determining the objectives and goals of the enterprises
- Framing policies and plans to achieve goals
- Assembling the resources like money, men and materials
- Exercising effective control
- Providing overall leadership

Middle level of Management

- Implementing the policies and plan laid down by the top management
- Preparation of organizational setup in their departments
- Selecting suitable operative and supervisory personnel
- Assigning duties and responsibilities to lower management
- Maintaining coordination between departments
- Collecting reports and information on performance
- Reporting to top management

Lower level of Management

- Planning of day to day work
- Give orders to execute the work
- They arrange material and equipment for workers
- Provide job training to workers
- Maintain proper discipline in section and good relation among workers
- Communicate the problems of workers to higher level

Administrative functions

The five functions of management as defined by Henri Fayol are:

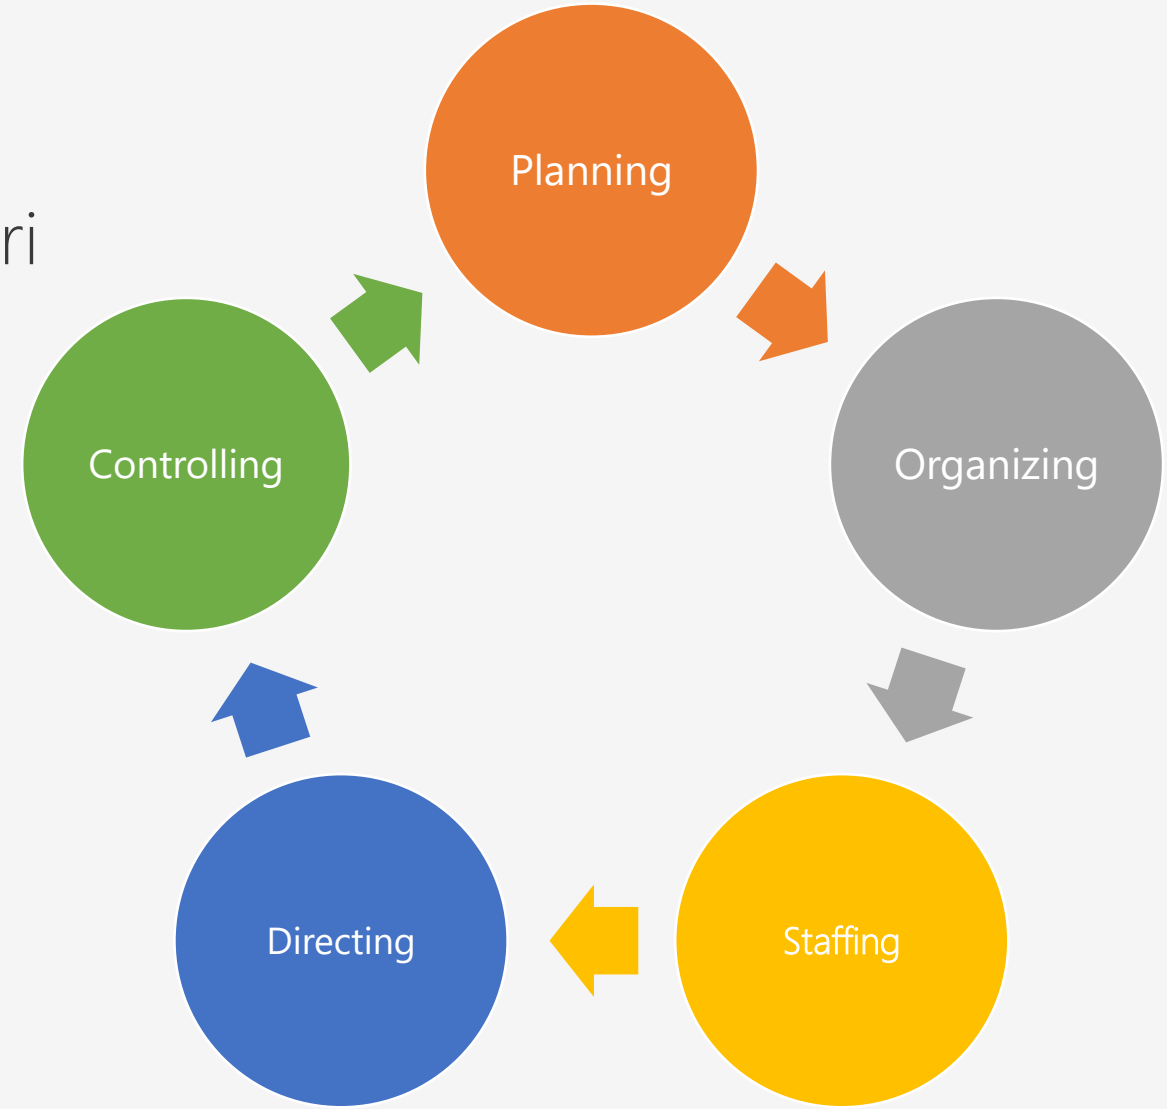
Planning,

Organizing,

Staffing,

Directing,

and Controlling



Planning

1. Establishing of objectives
2. Establishment of planning premises
3. Choice of alternative course of action
4. Formulation of derivative plans
5. Securing co-operating
6. Follow up of plans

Organizing

1. Identification of activities
2. Departmentally organizing the activities
3. Classifying the authority
4. Co-ordination between authority and responsibility

Staffing

1. Staffing is an important function
2. Staffing is a pervasive activity
3. Staffing is a continuous activity
4. The basis of staffing function is efficient management of personnel

Directing

1. Pervasive function
2. Continuous activity
3. Human factor
4. Creative activity
5. Executive function
6. Delegate function

Controlling

1. Two basic purposes

    a. It facilitates co-ordination

    b. It helps in planning

2. Controlling is an end of function

3. Controlling is pervasive function

4. Controlling is forward looking

5. Controlling is a dynamic process and 6. Controlling is related with planning

Management

It is very difficult to have an all-encompassing definition of management which covers all its characteristics. Management is a vital function concerned with all aspects of the working of an enterprise. Management has been defined in a number of ways. Prof Haimann has interpreted the term “management” in three distinct aspects:

1. Management as a field of study or a subject.
2. Management as a team or class of people or a noun.
3. Management as a process.

Some of the important definitions of management are:

According to Koontz, “Management is the art of getting things done with people and through informally organised groups. It is the art of creating an environment in which people can perform as individuals and yet cooperate towards attainment of group goals. It is the art of removing blocks for such a performance, a way of optimising efficiency in reaching goals.”

According to Dalton E. McFarland, “Management is the fundamental integrating and operating mechanism underlying organized effort.”

Some of the important definitions of management are:

According to George R. Terry, “Management is a distinct process . . . performed to determine and accomplish stated objectives by the use of human beings and other resources.”

According to Harold Koontz and Cyrill O’Donnel, “Management is the creation and maintenance of an internal environment in an enterprise where individuals, working together in groups can perform efficiently and effectively towards the attainment of group goals.”

Some of the important definitions of management are:

According to W. Jack Duncan, “Management consists of all organizational activities that involve goal formation and accomplishment, performance, appraisal and the development of an operating philosophy that ensures the organization’s survival within the social system.”

According to Kimball and Kimball, “Management may be defined as the art of applying the economic principles that underline the control of men and material in the enterprise under consideration.”

Components of Management

Different components of management are given below:

1. **Organisational activity:** Management is a group activity. Management is to coordinate the actions and reactions of individuals.

2. **Goal formation:** Management has some defined goals to be achieved. Goals are set considering the actions and reactions of individuals.

3. **Goal accomplishment and evaluation:** Management also evaluates the effectiveness of goal accomplishments.

4. **Organisational survival:** Managers are expected to use the resources available to them as efficiently as possible to guide the survival of an organization in the competitive world. The ability to forecast and adopt to change is also important components of management for organizational survival.

5. **Implementation:** Action is the creed of management. Policies and programmes are implemented by management.

Basic Principles of Management

The basic principles of management apply to individuals, small and large libraries.

1. Characteristics of a Good Manager.
2. Strategic planning must complement strategic thinking and acting.
3. Developing a Project Management Body of Knowledge.
4. Assessing risk related to human resources, material supply and managing it at the same time.
5. Recognising professional skills required for a librarian.
6. Directing towards accomplishment of concrete results.
7. Creating new situations needed for further improvements in the organisation.

Henri Fayol's Principle of Management

Following are the fourteen principles of management developed by the Henri Fayol:

1. Division of Work
2. Authority and Responsibility
3. Discipline
4. Unity of Command
5. Unity of Direction
6. Subordination of Individual Interests to General Interests
7. Fair Remuneration to Employees
8. Centralization and Decentralization
9. Scalar Chain
10. Order
11. Equity
12. Stability of Use of Personnel
13. Initiative
14. Spirit of Co-operation

Taylor's Principles

The fundamental principles that Taylor saw underlying the scientific approach to management may be summarized as follows:

1. Replacing rules of thumb with science (organized knowledge);
2. Obtaining harmony in group action, rather than discord;
3. Achieving cooperation of human beings, rather than chaotic individualism;
4. Working for maximum output, rather than restricted output; and
5. Developing all workers to the fullest extent possible for their own and their company's highest prosperity.

Barnard's Principles

The fundamental principles that Taylor saw underlying the scientific approach to management may be summarized as follows:

1. Replacing rules of thumb with science (organized knowledge);
2. Obtaining harmony in group action, rather than discord;
3. Achieving cooperation of human beings, rather than chaotic individualism;
4. Working for maximum output, rather than restricted output; and
5. Developing all workers to the fullest extent possible for their own and their company's highest prosperity.

Library Management

The management of a library means, in simple terms, efficient and effective management of material (information resources), machinery, men and money to meet the objectives of the library.

At this juncture, it is necessary for us to have a quick look at some of the basic characteristics of service and not-for-profit organizations. Four important characteristics of service are:

1. **Intangibility (or impalpability):** Services often may not directly appeal to the, senses of customers.
2. **Inseparability (i.e., customer participation in service production):** Service is usually produced in the presence of customers and service production and consumption are inseparable.
3. **Heterogeneity (variability):** Service rendered cannot be fully standardised and as a result there will be variations in the quality of service rendered to different customers.
4. **Perishability (Non-inventoriability):** Many times service cannot be stored and an inventory developed for later physical distribution.

Library Management

Management of a library (as a service organization) is accomplished by a combination of basic management functions and skills discussed earlier as well as management of roles. One can think of three important roles for a library manager:

1. Interpersonal role: (a) library manager as a figurehead with duties of a ceremonial nature, (b) leading role, (c) Raison role.
2. Informational role: (a) perpetually scanning and monitoring information, (b) disseminator role, (c) specific role of informing and satisfying various groups.
3. Decisional role: (a) As entrepreneur looking out for new ideas and adopt them for change (b) solving unanticipated problems and handling disturbances, (c) resources allocation role of dividing work and delegating authority, (d) negotiator role.

Management Theories

1. **Classical Organization Theory School :** Scientific management was concerned with increasing the productivity of the shop and the individual worker. Classical organization theory grew out of the need to find guidelines for managing such complex organization as factories. Classical Organization Theory focused more on managing the total organization. Henri Fayol was the leader in this field, and he was the first to identify planning, organizing, leading, and controlling as important managerial concepts.
2. **The Behavioural Approach :** It emphasizes scientific research as the basis for developing theories about human behaviour in organizations that can be used to develop practical guidelines for managers.
3. **Theory X and Theory Y:** Douglas McGregor (1906–1964) developed the Theory X and Theory Y dichotomy about the assumptions managers make about workers and how these assumptions affect behaviour.

Management Theories

(a) Theory X managers tend to assume that workers are lazy, need to be coerced, have little ambition, and are focused on security needs. These managers then treat their subordinates as if these assumptions were true.

(b) Theory Y managers tend to assume that workers do not inherently dislike work, are capable of self-control, have the capacity to be creative and innovative, and generally have higher-level needs that are often not met on the job. These managers then treat their subordinates as if these assumptions were true.

(c) Workers, like all of us, tend to work up or down to expectations.

Functions of Administration Department

Administration is the range of activities connected with organizing and supervising the way that an organization or institution functions. Administration in an organization helps in the proper running of the organization in all aspects. Administration is the basic need for a long term organization. The role of administration department within an organization is to process all of the admin and documents for the rest of the company. There are many different departments that need to have different things done with their admin. The main functions of an administration department of an organization are:

Functions of Administration Department

- To process paperwork for external suppliers.
- To process paperwork and information for internal people. This could be anything from looking after the basic bills to the internal post.
- Looking after the internal communications so that all members of the organization are aware of what is going on within the organization.
- Organizing any deliveries or suppliers coming into the offices for the day for any reason.
- Arranging company extras such as company cars and any hotels for business trips that may be needed.
- Sending out any mail on behalf of the company. This could be for different stakeholders, customers or even for staff.

Management Theories

4. Management by Objectives

Management by objectives is one of the modern approaches to management, which was introduced by Peter Drucker. He mentioned that what the enterprise needs is the principle of management that will give full scope to individual strength and responsibility and at the same time provide a common direction to vision and effort, establish teamwork and harmonize the goals of the individuals with the common organizational goals. MBO is a system in which specific performance objectives are determined through participative approach. Progress towards objectives is periodically reviewed and rewards determined accordingly.

The key to MBO is that it is a participative process, actively involving managers and staff members at every organizational level. By building on the link between the planning and controlling functions, MBO helps to overcome many of the barriers to planning.

Summary

- Library administration means managing the performance of the operations and other activities of a library and then finally making important decisions.
- Practically, there is no difference between management and administration. Every manager is concerned with both – administrative management function and operative management function.
- Management is really a subset of administration, which has to do with the technical and Notes mundane facets of an organization's operation.
- "Levels of Management" is defined as a part of an organization that maintains responsibility for the productivity and the work performance of employees.

Summary

- Henri Fayol a pioneer in the field of Management developed five functions of management. *They are:* Planning, Organizing, Staffing, Directing, Controlling.
- Management is a vital function concerned with all aspects of the working of an enterprise.
- Bernard's thesis is a social systems approach, concentrating on major elements of the managerial job, containing extraordinary insights on decision making and leadership.
- The Behavioural Approach emphasizes scientific research as the basis for developing theories about human behaviour in organizations that can be used to develop practical guidelines for managers.

Summary

- Henri Fayol a pioneer in the field of Management developed five functions of management. *They are:* Planning, Organizing, Staffing, Directing, Controlling.
